TOBY Aquamax water based flooring products deliver great looking, durable floors that are environmentally friendly and easy to maintain.

TOBY has earned one of the most respected names in the timber flooring industry. Our pedigree goes back more than twenty years and is the result of our total commitment to quality and service.

Our extensive knowledge of the flooring industry enables us to continually improve TOBY products and create new ones to meet changing needs.

That's why we developed the Aquamax range of environmentally friendly, waterbased floor finishes that are easy to care for.

Why choose Aquamax?

- High quality finish
- Easy care
- Excellent durability and abrasion resistance
- Better for your home and the environment
- No solvent odours, so you can move back into your home faster
- Low VOC when compared with solvent-based alternatives
- Better for asthma and allergy sufferers

What is a VOC?

Solvents and other petrochemical additives that evaporate from resin-based floor finishes are known as Volatile Organic Compounds (VOCs).

The VOC content and CO2 emitted during manufacturing are key contributors to environmental impact, primarily in the form of air pollution and, to a lesser degree, 'greenhouse gases'. In addition, VOCs may trigger respiratory reactions.

An environmentally friendly floor coating is one that offers minimal environmental impact throughout its life cycle.

The low VOC and low odour formulation of TOBY Aquamax contributes positively to indoor air quality and reduces air pollution.
